DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

2. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is rejected because it is unclear how the thin film is nonreactive with ions but permits passage of Li ion but does not have a Li ion conductivity. This is because this phrase is contradictory because if the Li ions can pass through then the film would conduct and if the Li ions cannot pass through then the film would not be conductive.

Claim Rejections - 35 USC § 102

3. Claims 1, 4, 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Chaloner-Gill et al. (5,354,631).

Chaloner-Gill et al. teaches in column 3, lines 23-53, a method of making an anode comprising the steps of coating a lithium or lithium alloy metal surface with a polymer comprising a silane represented by Formula I. Also, teaches a method of passivating a lithium or

lithium alloy metal surface by treating the surface with a composition of polymer precursors comprising the silane and curing the polymer precursor to form an ultra thin polymeric layer of submicron thickness.
